POWER APPS DISCOVERY WORKSHOP

Advanced introduction workshop for exploring **Power Apps**' full capabilities with concrete customer case stories and use cases

Power Apps is well-known about its **business applications and process automation** capabilities using Microsoft Dynamics and Dataverse, but it offers much more.

The workshop goes beyond those well-known features and also focuses on less popular, yet valuable opportunities that provide practical solutions

Power Apps works seamlessly with other Power Platform products: **embed a Power BI report into Power Apps,** or vice versa, embed a Power Apps application into a Power BI report and explore how **Power Automate** runs in the background automating recurring processes.

During the workshop participants will explore various use cases for reference data entry and collection, and learn about other useful ideas to automate, facilitate, and streamline data management and collection within the organization.

The presentation will be supported by **demos** and **concrete examples** of already implemented **customer solutions**. Additionally, attendees will receive a comprehensive information pack about the **Power Platform**.

1000 € fixed price (without customization)

Assessment duration: 2-4 hours (without customization)

All organizations who want to explore the full potential of Power Apps

End deliverable: clear understanding of Power Platform and Power Apps
